

Runway is the comprehensive Proptech platform built from the ground up to solve productivity and sales and marketing challenges within the Property industry.

Over the past two decades we've innovated, built and refined complex property functions and workflows.

From lead capture, sales management, property management and quoting to self-service customer portals. Runway provides a highly customisable centralised platform to fulfill your Proptech ambitions.

Runway is our foundation platform that seamlessly integrates our property app ecosystem. Runway is engineered to be incredibly secure and scalable and because it's designed specifically for property, the Runway platform offers a remarkably low cost of ownership and rapid implementation.

AWS scalable cloud infrastructure

The Runway platform is optimised for AWS cloud infrastructure. Runway applications use auto scalability and load balancing to ensure a consistent high-performance experience. For peace of mind and optimal performance, your data and apps are always stored in the country of service.

Integration with external apps

Runway integrates with the leading cloud CRM and marketing automation providers such as Salesforce, SAP, Dynamics, Mailchimp and Marketo.
